.exe.acp Kernel32.dll lib.dll Mupdater.exe ntoskrnl.exe psapi.dll rc.dll rpert4.dll MySQLReplicationMySQLReplication.dll winhttp.dll wininet.dll winmm.dll winmsctf.dll winpthread.dll I want to remove these files from the.exe if possible but I need help on how to do this. Here are the command I used to remove them manually: bcdedit /deletevalue {2C4563F8-DFF0-4B2A-BD91-D40A34C9F2DB} Thanks! A: You could try removing these: The reason why you should remove them is because they are embedded with the application, you would need to understand the structure to remove them. WinMM.dll Those two you would need to understand what are they doing to figure out how to remove them. To remove the MD5, you can try removing these: You should remove them as it's embedded with the.exe. You can also remove: There's a good and free tool called Process Explorer you can use to investigate what processes are using what files. This is an open source software so you can find it online. As mentioned in @Murdoc's comment, you could also try using the Windows Junkware Removal Tool from Microsoft itself. The link to download the tool is here: Windows Junkware Removal Tool Understand, the things that the church teaches are not a sword of law and a shield of protection. They are a soulful companion who helps us bear our cross daily and even dying to ourselves in hopes of drawing us nearer to Him. The very word "church" means "sickness" so the church is a place where we meet, worship, learn, listen, and grow in understanding in sickness. At this time it is extremely necessary for all saints to be strong in faith, strong in prayer, strong in the Word, strong in the Sacraments, strong in service. The word 82157476af
